

ARGUS: Auditing Causal Identification in Environmental Policy Evaluation

Identification credibility varies across policy contexts, assumptions and evidence

CONTEXT-DEPENDENT IDENTIFICATION CREDIBILITY IN POLICY EVALUATION

ARGUS AUDIT FRAMEWORK

Input:
Empirical Studies

(study, identification dimension, risk)
triplets with evidence-grounded audit reports

- decomposes DID identification assumptions
- localizes risks across auditable dimensions
- grounds each flag in tables, figures, text and policy context
- produces human-review reports, not causal truth verdicts

For auditing causal identification credibility
in empirical environmental policy research
